

PROJECT: STONE REUSE – A STEP TOWARDS CIRCULAR DESIGN

With the support of the ELY grant, Peska Solutions carried out a development project in 2023–2024 focused on circular economy within the stone industry. The aim was to explore the potential of utilizing leftover materials from quarries and transforming them into sustainable products for garden and design applications.

The project resulted in valuable insights into market potential, logistics, and product development. Among other outcomes, 10 prototypes were developed, and a thorough analysis identified the key conditions required to achieve economic viability in circular stone processing.
